

Dialysis Access & Maintenance

Medicine
without limits

LVI

LAKELAND VASCULAR

INSTITUTE

A Full Range

OF ENDOVASCULAR PROCEDURES FOR DIALYSIS PATIENTS

At Lakeland Vascular Institute, we understand that every dialysis patient is unique, and therefore every approach to dialysis access planning, creation and management must be specially crafted for the needs of the individual patient.

Our interventional radiologists have the knowledge, skill and a long history of supporting nephrologists while minimizing risks for their patients. Consider us part of your multidisciplinary team, adept at the full range of endovascular procedures and always available to consult with you to achieve the best possible individualized care for your patient.

The interventional radiology staff at Lakeland Vascular Institute supports you and your patients with the full range of dialysis planning, access and maintenance procedures.

OUTPATIENT CENTER

Patients can now have their interventional nephrology procedures performed in our convenient outpatient center in Lakeland. In addition to easier access and a more patient-focused environment, they may be afforded a lower risk of infection as well as lower overall costs for their procedure and care.

DIAGNOSTIC

- » Diagnostic sonography
- » Vascular access planning/mapping

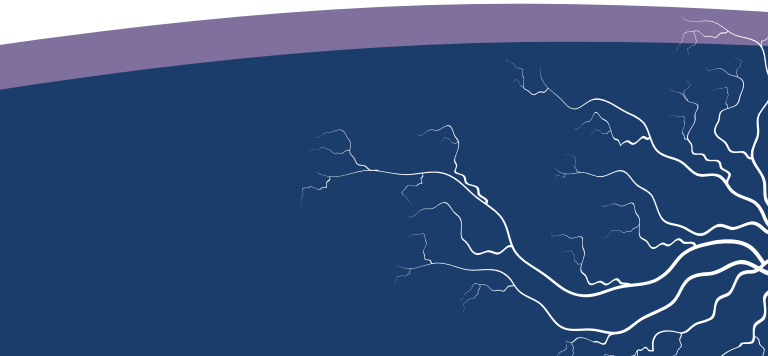

VASCULAR TREATMENT & MAINTENANCE

- » Angiogram
- » Angioplasty (with or without stent placement)
- » Mechanical thrombectomy of clotted AVFs and AVGs
- » Accessory vein embolization

DIALYSIS ACCESS

- » Tunneled dialysis catheters for vascular access (hemodialysis)
- » Fibrin sheath removal from chronic indwelling central venous catheters
- » Percutaneous endovascular procedures to maintain arteriovenous fistulas or grafts in ESRD patients
- » WaveLinQ – A minimally invasive alternative to surgical fistulas that increases the number of venous wrist access points for improved viability and reduced scarring.

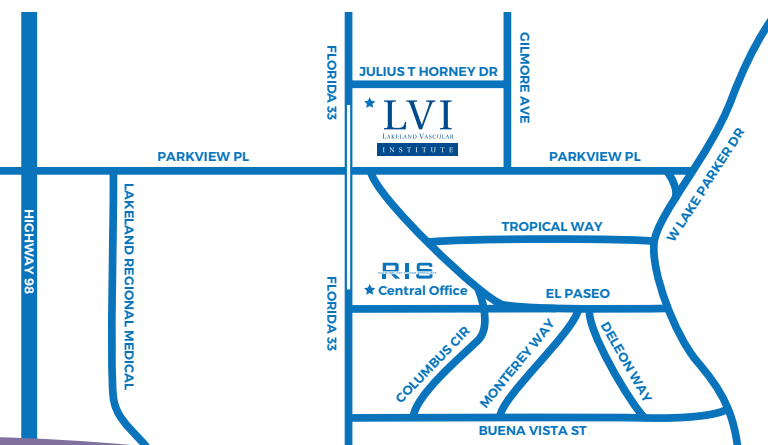

LAKELAND VASCULAR INSTITUTE

MEDICINE WITHOUT LIMITS™

Interventional radiology (IR) represents an exciting new frontier in disease and pain treatment. Today's IR therapies are more precise, less invasive and more effective than ever... giving you and your doctor additional options to treat disease and restore you to optimal health.

At the Lakeland Vascular Institute, we do so much more than treat vascular disease. We use the body's vascular system—along with state-of-the-art imaging guidance—to reach the source of the problem and deliver precisely targeted therapy. Cancerous tumors. Spine fractures. Abdominal aortic aneurysms. Uterine fibroids. Migraine headaches. And of course, vascular disease and access. These and many other health conditions can be treated faster, less expensively and with greater safety and accuracy than ever before.

Patients visit the LVI clinic for consultation pre-treatment or follow-up post-treatment.
